

PRESS RELEASE

April 2025

The multiplier event of the GreenGenerations project in Greece

At the end of March, **Stimuli for Social Change**, with the support of the **1st Primary School of Alexandria**, had the pleasure of organizing and implementing the **multiplier event** of the **GreenGenerations project**. The event took place at the **Folklore Cultural Association of Alexandria** and aimed to introduce key concepts related to **intergenerational education**, while also showcasing the **main results and achievements** of the GreenGenerations project.

The primary goal of the GreenGenerations multiplier event was to introduce participants to the concept of **intergenerational learning for sustainability**, to present the **key results of the GreenGenerations project**, and to provide practical guidance on how to implement the **GreenGenerations Curriculum** in classroom settings.

The workshop was designed to be **interactive**, encouraging participants to ask questions, share their experiences, and reflect on how climate education can be enriched through intergenerational collaboration.

In the first part of the event, **Stimuli for Social Change** presented the **objectives, methodology, and outcomes** of the GreenGenerations project, with a focus on the **Greek version of the GreenGenerations Curriculum** and the accompanying **Teacher Training Package**. Following this, the **1st Primary School of Alexandria (1st PSA)** shared the **results from the piloting phase**, presenting their experience and insights to the participants.

Participants appreciated that the curriculum and all material offer **detailed instructions for parents, teachers and students**, along with **flexible activities** and **supporting materials** and the **platform** that can be used in both **online and offline** learning environments.

The event concluded with an interactive **role-playing activity**, where participants took on the roles of community members, exploring challenges and interests related to climate change. **GreenGenerations once again highlighted the vital role of education in the transition toward a greener and more responsible future.**
