March 2025

GreenGenerations: tackling climate change through intergenerational learning

The GreenGenerations project is almost in the end...or is it not?

Over the past two years, the GreenGenerations consortium has worked collaboratively—and with great enthusiasm—toward the successful implementation of the project and the development of its key results.

Our main goal has been, and continues to be, to bring clear EU added value. One of the fundamental aims of building a cohesive and sustainable European society is to promote shared values and eco-friendly attitudes through education. The ultimate objective of the GreenGenerations project is to equip teachers with a school curriculum that includes educational resources and activities designed to engage students and their families in tackling climate change through intergenerational education.

We offer innovative, comprehensive, and practical tools that empower students to take action and adopt environmentally responsible habits and behaviors in various aspects of their daily lives.

Throughout the project, the following results have been developed:

- GreenGenerations Training Package: <https://www.greengenerations.eu/en/training-resources.html>
- The GreenGeneration Curriculum
- The GreenGenerations online platform: <https://www.green-generations.eu/>

Impact

Over 20 educators and 200 students across France, Greece and Romania have already benefited from the GreenGenerations resources, integrating climate education into classrooms and family life

While the project cycle is coming to an end, our mission continues. The GreenGenerations resources will remain freely available, and we hope to inspire further initiatives that bring intergenerational climate education to life in even more communities.
